Redesigned Classic Month and Multi-Week Views

We have released fully redesigned versions of the Classic Month and Classic Multi-Week calendar views that take advantage of modern browser capabilities to improve event layout, provide better accessibility for those with disabilities and add new features such as collapsible weeks and enhanced style settings.

Single and multi-day events are now dynamically arranged to make the most use of screen real estate. Events on the view are always ordered chronologically so screen readers will read out event information in a logical order with special handling to communicate events that visually span multiple days. By default, the new views show the first several events on each day (depending on event heights) with an option to expand the week and see all events. This feature can be adjusted or disabled by the publisher through the calendar view settings.

All existing Classic Month and Multi-Week views have been automatically replaced with the new views.

Here are a few links to live calendars using the new views.

- University of Washington College of Arts
- City of Ann Arbor
- Cornell College
